# X-ray Image Capture & Archive Design

Medical records are generally considered as 'permanent records' which means that your storage archive will continue to grow.

X-ICAD provides departments the opportunity to go film less, create digital medical surveillance archives or distribute images on media thereby replacing traditional film copies. This is especially useful in departments where employment records need to be kept for an extensive time period. Our X-Ray scanning bureau has invested in the latest radiographic scanners & Teleradiology software, which allows for archiving of patient & study data on single media, i.e. CD-R's or DVD's.

X-ICAD is the market leading x-ray film scanning company that provide value pricing and quality x-ray conversion. Our services include queries and retrieval on your digital archive.

## Computed Radiography (CR) Systems

X-ICAD is dedicated to satisfy the emerging Digital Imaging market with cutting edge CR systems to replace outdated film based systems. We offer clients either the FireCR+ Medical CR Reader or the variety of CR systems from the iCRCo.

Computed Radiography can save you money that you'd otherwise spend on film & storage. The CR system can assist in helping you manage your images electronically - eliminating the need for film jackets, file rooms, and slow film retrievals.

## Digital Document Solutions

There's no getting around the need to manage increasingly huge amounts of documents—from creation through processing to disposition. With an array of services X-ICAD cover all aspects of document & records management. Our facility feature the highest quality equipment and software for processing of high volume scanning projects on & off-site. X-ICAD hosts and manages captured data, in addition to the distribution of data on portable media with built-in retrieval software.

Alchemy CD/DVD distribution is unique in its ability to automatically create portable media for our customers that include all the necessary software to manage documents. And you don't need a separate SQL or relational database license, so there's no extra software or hidden fees. Images can be accessed by single or multiple users to a PC or via a central server for local and wide area network retrieval.
